Reasons for Allowance

The following is an examiner's statement of reasons for allowance: Although it is known, from the prior art of record (i.e., EP 0475386 B1 and JP 06329567), that acrylic esters can be dimerized with transition metal catalysts (e.g., ruthenium, rhodium, nickel, palladium, etc.) to form the corresponding hexenedioates, which can subsequently be reduced to produce 1,6-hexanediol, applicants have demonstrated (by way of comparative unexpected results: see examples) that when a rhodium dimerization catalyst system is used with a chromium free hydrogenation catalyst, the yield and purity of the desired product is markedly increased. All claims (1-16) are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
